1. About “Rotatr”

Rotatr is the premium Ajax based countdown template designed by iDangero.us. It is designed for temporary usage until the main site is under construction. It comes with an awesome animated clock with a countdown to the grand opening date, brief information about the main site (or company) and Ajax Contact form with validation. Also, there is an opportunity for visitors to leave their email address to be informed when the site will open.

This template is easy to redesign, it has very simple and clear API.

2. Rotatr Files & Folders Structure

Rotatr files are located in the **rotatr/** folder from the downloaded archive:

content: in this folder there are .php files with content pages.

css: folder with a .css files for different color themes.

images: here you can find layouts images and icons used in this Template and for other color themes.

scripts: JavaScripts and PHP scripts used in this template

And the main **index.html** in the root folder

3. Installation

To install **Rotatr** template you have to copy all files & folders from the **rotatr/** folder to your web-site root folder on the server (It could be a real server or local testing server).

4. HTML Structure

Let's look at the main HTML structure of the Rotatr template. Open index.php file with a text editor (Highly recommended to use Adobe® Dreamweaver® or Notepad ++ editors).

Index.php structure:

```
1 <!DOCTYPE HTML>
2 <html>
3 <head>
4 <meta http-equiv="Content-Type" content="text/html; charset=utf-8" />
5 <link rel="stylesheet" type="text/css" href="css/rotatr-red.css" />
6 <script type="text/javascript" src="scripts/jquery-1.6.1.min.js"></script>
7 <script type="text/javascript" src="scripts/cufon-yui.js"></script>
8 <script type="text/javascript" src="scripts/Myriad_Pro_400-Myriad_Pro_600.font.js"></script>
9 <script type="text/javascript" src="scripts/jquery.id.chopslider-1.0.js"></script>
10 <script type="text/javascript" src="scripts/jquery.id.twitterfeed-1.0.js"></script>
11 <script type="text/javascript" src="scripts/rotatr.js"></script>
12 <!--[if IE 6]>
13 <link rel="stylesheet" type="text/css" href="css/ie6.css" />
14 <script type="text/javascript">
15 isIE6=true;
16 </script>
17 <![endif]>
18 <title>Rotatr - Premium Countdown Template</title>
19 </head>
20 <body>
21 <div id="background"></div>
22 <div id="wrapper">
23 <div id="features"></div>
24 <div id="logo"></div>
25 <div id="date-panes">
26 <h2 class="panes-heading cufoned">Relaunch In:</h2>
27 <div class="days date-pane">
28 <div class="shadow"></div>
29 <div class="legend">Days</div>
30 <div class="day"><div class="day2"></div></div>
31 </div>
32 <div class="hours date-pane">
33 <div class="shadow"></div>
34 <div class="legend">Hours</div>
35 <div class="hour"><div class="hour2"></div></div>
36 </div>
37 <div class="minutes date-pane">
38 <div class="shadow"></div>
39 <div class="legend">Minutes</div>
40 <div class="minute"><div class="minute2"></div></div>
41 </div>
```

CSS and JavaScript files attachment

CSS style sheet file used for IE6 browser only

And if the visitor's browser is IE6 then the **isIE6** variable will be equal to **true**

Site Title

Section with an additional background image

Wrapper div contains whole site content

Date-panes section contains the three panes with days, hours and minutes

Number of days will be placed here by JavaScript.

Number of hours will be placed here by JavaScript.

Number of minutes will be placed here by JavaScript.

Blinking colon

Twitter feed will be loaded here

```

Container with an additional content
on homepage.

Footer

Footer Section

Footer section is used for copyrights information of you company or project. It will be automatically added to any loaded page.

```
<div class="footer">
  --- Footer Content ---
</div>
```

Change `--- Footer Content ---` to something like this: **© 2010 My Company. All Rights Reserved**

5. Rotatr Configuration / Setting up the Clock Timer

Rotatr clock timer configuration is located in the main script file in the scripts/rotatr.js file. Let's open this file with a text editor and will find out how to set up target date for the clock timer:

```

rotatr = {
  targetYear : 2012,
  targetMonth : 0,
  targetDate : 1,
  targetHours : 0, //In UTC+00 Time zone
  targetMinutes : 0,
  replaceFonts : ".cufoned,.legend,.day,.hour,.minute,.seconds1,.seconds2,.intouch-status",
  sliderParams : {
    loader : "#slide-loader",
    slide : ".slide",
    nextTrigger : "a#slide-next",
    prevTrigger : "a#slide-prev",
    type: "vertical",
    disableCSS3 : false,
    xOffset: 50,
    yOffset: 0,
    hPieces : 10,
    vPieces: 40,
    rotate : 180 ,
    rotateSymmetric: true,
    scaleX:0,
    scaleY:0,
    dur1: 600,
    dur2 :10,
    dur3: 600,
    pieceDelay : 80,
    xFadeDelay :0,
    hideControls:true
  },
  twitterFeed : {
    container : "#tweets",
    username : "idangerous",
    numberOfTweets : 1,
    tweetFormat : '<li class="single-tweet">'
                  + '<p class="tweet-text">'
                  + '%tweetText'
                  + '</p>'
                  + '<p class="tweet-date">on %tweetDate</p>'
                  + '</li>'
  }
}

```

Clock Timer Settings

To set up target date we will need the following parameters:

targetYear

Numeric value. Target year of the grand opening date.

targetMonth

Numeric value. Target month of the grand opening date. Months here are starting from 0 (January) to 11 (December)

targetDate

Numeric value. Target date of the grand opening date. From 1 to 31.

targetHours

Numeric value. Target hour of the grand opening date. From 0 to 23.

targetMinutes

Numeric value. Target minutes of the grand opening date. From 0 to 59.

Cufon replacement

replaceFonts

String value. List of CSS selectors of the elements for which will be executed font replacement.

Slider Settings

loader

String value. CSS selector of the slide-loader container.

slide

String value. CSS selector of the single slide container.

nextTrigger

String value. CSS selector of the “slide-next” element.

prevTrigger

String value. CSS selector of the “slide-prev” element.

type

String value. Can be “vertical”, “horizontal” or “multi”

disableCSS3

Boolean value. “true” or “false”

xOffset

Numeric value. Horizontal offset of slide pieces in px

yOffset

Numeric value. Vertical offset of slide pieces in px

hPieces

Numeric value. Number of horizontal pieces. Used in “horizontal” and “multi” sliders type.

vPieces

Numeric value. Number of vertical pieces. Used in “vertical” and “multi” sliders type.

rotate

Numeric value. Rotate angle in degrees for each slide piece

rotateSymmetric

Boolean value. “true” or “false”

scaleX

Numeric value. Horizontal scale multiplier for each slide piece

scaleY

Numeric value. Vertical scale multiplier for each slide piece

dur1

Numeric value. Duration in ms for the first transition part

dur2

Numeric value. Duration in ms for the second transition part – cross fade time for each slide piece to the new image

dur3

Numeric value. Duration in ms for the last (final) transition part

pieceDelay

Numeric value. Delay in ms for the each slide piece

xFadeDelay

Numeric value. Delay in ms between first transition part and start of cross fade (second transition part)

hideControls

Boolean value. “true” or “false”. Should the slider triggers be hidden during the animation

Twitter Feed

container

Container for the Twitter feed. In this case this is the element with a “tweets” id attribute. By the default it is located in the right bottom module - `<ul id="tweets">`

username

Your Twitter Username here.

numberOfTweets

Number of your recent tweets (including re-tweets) to display

tweetFormat

HTML format to display every tweet. If you want to use your own tweet formatting feel free to edit default format.

You can use the following replaceable variables : **%username** - will be replaced with your username

%tweetDate – will be replaced with Tweet date

%tweetText – will be replaced with Tweet text

6. Typography

Additional Myriad Pro font usage

Rotatr is powered with an awesome additional Myriad Pro font. Its usage is available due to the Cufon JavaScript library.

To use Myriad Pro font for template elements all you need is to add “**cufoned**” class to them.

Headings

There is only one heading type used in this template. It used here for titles of in popup window and in content section titles:

Be the first to know

You need the following formatting for such headings:

```
<h2 class="heading">Some Heading</h2>
or
<h2 class="heading cufoned">Heading with Myriad Pro font</h2>
```

Button

To create button you have to create “link” or “button” element with a “button” class and wrap it with two spans like in example below

You should use the following formatting for buttons:

```
<span class="button-l">
  <span class="button-m">
    <a href="index.php" class="button">Button Text</a>
  </span>
</span>
---- or ----
<span class="button-l">
  <span class="button-m">
    <input type="submit" class="button" value="Button Text">
  </span>
</span>
```

7. Inner Linking (Popup Window)

As the Rotatr is the “one-page” template, all additional content should be loaded into Popup Window. So let's see how the Inner Linking works. This you should know first:

*All files with HTML content you want to put into Popup Window with Ajax request must be located in the **content/** folder.*

*All files must have a **.php** extension.*

Example 1. We want to put HTML content from the **content/about.php** file into the Popup Window. We should use the following formatting:

```
<a class="popup" href="#about">About Rotatr</a>
```

When we'll specify a “popup” class, the script will load file content with Ajax into Popup Window

Filename of the **php** file from the **content/** folder specified in the **href** attribute **after the hash character**.

Example 2. We want to put HTML content from the **content/about.php** file into the Popup Window. We also want to set popup window width to 900px. We should use the following formatting:

```
<a class="popup" href="#about" rel="900">About Rotatr</a>
```

We can set width of popup window with additional REL attribute. So in this case new window will open and it will be 900px in width

As you can see it is very easy to use Inner Linking. All you need is to specify filename in the HREF attribute after the hash character and to specify the “**popup**” class to load content into Popup Window with Ajax.

8. CSS Files and Color Themes

CSS Files

There are two CSS files used in this Template and four additional CSS files used for color themes. You can find css attachment in the HEAD section of index.html file.

```

<head>
-----
<link rel="stylesheet" type="text/css" href="css/rotatr-red.css" />
-----
<link rel="stylesheet" type="text/css" href="css/ie6.css" />
-----
</head>

```

By default they are located in the **css/** folder. You can easily change the path or filename in the **href** attribute of **link** tag.

rotatr-red.css file contains all general layouts for the template and its Black color theme. It is separated into sections:

```
/* --- Common Rules --- */
```

There are common rules in this section, such as font size, fonts, link colors, layout images etc.

```
/* --- Logo--- */
```

Some rules for Logo

```
/* --- Wrapper--- */
```

All style rules for Wrapper

```
/* --- Date Panes--- */
```

Rules for date Panes, their size and position.

```
/* --- Seconds Ring--- */
```

Rules for the rotating seconds circle

```
/* --- Seconds Block Content--- */
```

All style rules for the content inside of rotating circle

```
/* --- Home Content--- */
```

Few rules for home content section, its size, position, heading

```
/* --- Footer--- */
```

Footer styling

```
/* --- Forms--- */
```

This section contains style rules for buttons and form elements

```
/*----- Popup Window-----*/
```

Styling rules for the popup window

```
/* --- Features--- */
```

Features button style rules

```
/* --- Slider--- */
```

This section contains style rules for the slider

```
/*----- Twitter Feed-----*/
```

Styling rules for the twitter feed

```
/*-----End of CSS File-----*/
```

If you would like to edit a specific section of the site, simply find the appropriate section in the CSS file, and then scroll down until you find the appropriate style that needs to be edited.

And the last CSS file **ie6.css** contains few rules for Internet Explorer 6 browser.

Color Themes

Rotatr comes with four color themes – Red (default), Blue, Light and Black. Now let's see how to apply color theme you need.

All you need to do is to change main CSS file to the appropriate color theme CSS file:

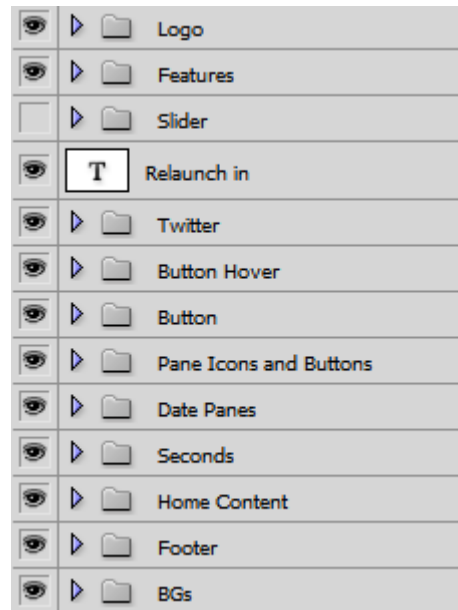

```
<head>
----- Default Red theme is -----
<link rel="stylesheet" type="text/css" href="css/rotatr-red.css" />
----- To use Blue color theme change it to -----
<link rel="stylesheet" type="text/css" href="css/rotatr-blue.css" />
----- To use Light color theme change it to -----
<link rel="stylesheet" type="text/css" href="css/rotatr-light.css" />
----- To use Black color theme change it to -----
<link rel="stylesheet" type="text/css" href="css/rotatr-black.css" />
-----
</head>
```

That's done.

9. PSD Files & Structure

There are **five** layered **.psd** files comes with the **Rotatr** template. You can locate them into **psd/** folder from the downloaded archive. Using these files you can easily redesign template. To edit these files you'll need an Adobe™ Photoshop™ (Recommended is CS4 or higher version)

First four .psd files are **rotatr-red.psd**, **rotatr-blue.psd**, **rotatr-light** and **rotatr-black.psd**. They contain all general layouts for template styling for every color theme:

Last psd file is the **social-bar.psd**, it contains social icons styling:

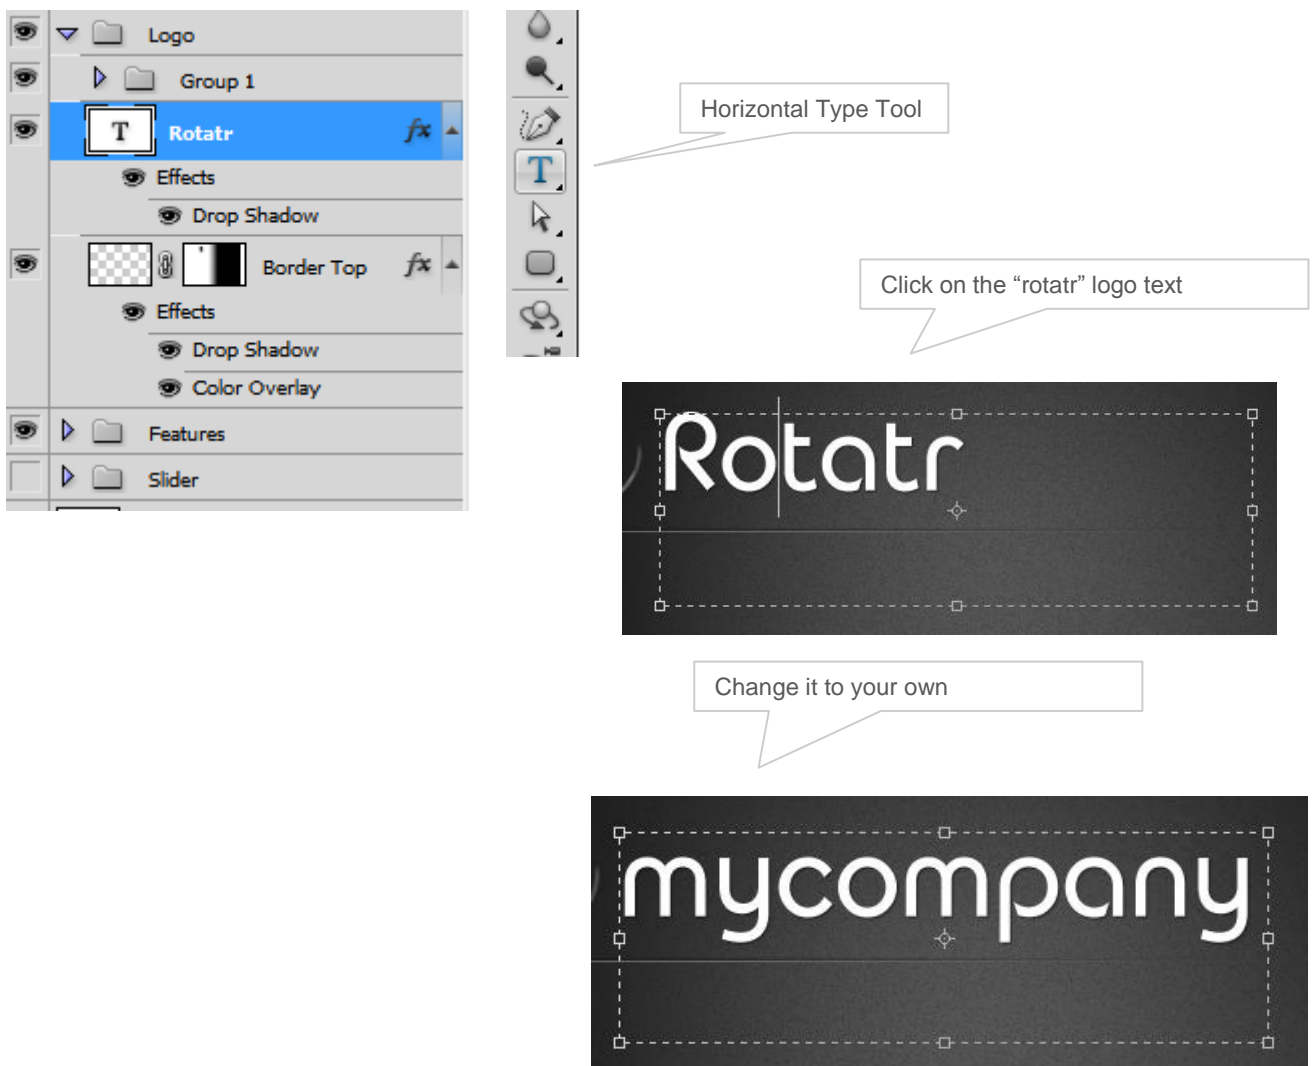

All layers in these file are well organized and easy to understand and redesign.

11. Customization

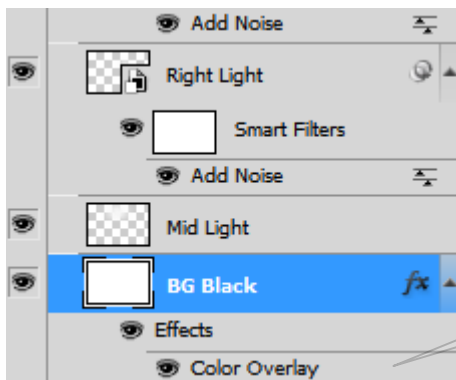

To customize Rotatr template you need to use included psd files and probably to make some changes in template CSS files.

Let's for example change logo and background color of black theme to orange.

First of all open *rotatr-black.psd* file. Find "Logo" layers group and expand it, choose "Horizontal Type Tool", click on the "Rotatr" logo text and type your own:

Now let's change background color to orange. Find the last "BGs" layers group and expand it, we will need here BG layers:

Now we have to cut these images for web usage. Go to **images/layouts-black/** folder. Find the appropriate files and pay attention to their size. It will be very good if they will be the same. In this folder we should replace **bg.jpg** and **logo.png** images.

- To make the same bg.jpg image (with a same size) you need to merge BGs layer group, and to cut it in 1200x700px from top center.
- To make logo.png image you need to merger "Logo" layers group.

After file replacement we need to open css/rotatr-black.css file and to find rules for body background and logo.

Body style rule is the first in file. We need to change its background color

```
body {
    background:#111 url(../images/layouts-black/bg.jpg) no-repeat top;
    font-family:Arial, Helvetica, sans-serif;
    margin:0px;
    font-size:13px;
    line-height:1.4em;
    color:#333;
}
```

We have to change to:

#111 color is changed to #a05307 (orange)

```
body {
  background:#a05307 url(../images/layouts-black/bg.jpg) no-repeat top;
  font-family:Arial, Helvetica, sans-serif;
  margin:0px;
  font-size:13px;
  line-height:1.4em;
  color:#333;
}
```

Actually if you replace logo and background images with same size images, don't need to change background properties for theme. Otherwise you probably will need to fix their size and position:

Rule for Logo:

Probably you'll need to change Logo's width, height, left and top positions

```
#logo {
  width:540px;
  height:157px;
  background:url(../images/layouts-black/logo.png) no-repeat left top;
  position:absolute;
  top:20px;
  left:0px;
}
```

As you can see it's very easy to customize Rotatr template, all you need is to find appropriate layer in psd file, replace existing image and make some changes in CSS file.

11. JavaScripts

Rotatr template uses six JavaScript files

Attachment of JavaScript files can be found in the HEAD section of index.html file:

```
<head>
-----
<script type="text/javascript" src="scripts/jquery-1.6.1.min.js"></script>
<script type="text/javascript" src="scripts/cufon-yui.js"></script>
<script type="text/javascript" src="scripts/Myriad_Pro_400-Myriad_Pro_600.font.js"></script>
<script type="text/javascript" src="scripts/jquery.id.chopslider-1.0.js"></script>
<script type="text/javascript" src="scripts/jquery.id.twitterfeed-1.0.js"></script>
<script type="text/javascript" src="scripts/rotatr.js"></script>
-----
</head>
```

You can easily change the path or filename in the **src** attribute of **script** tag.

The first script file is the jQuery (JavaScript library that greatly reduces the amount of code that you must write).

Second script file (cufon-yui.js) is the Cufon library. Used here for text replacement with a Myriad Pro font. [Visit official website](#).

Third script file (Myriad_Pro_400-Myriad_Pro_600.font.js) is the encoded Myriad Pro font.

Next file (jquery.id.chopslider-1.0.js) is the exclusive Chop Slider for the jQuery.

Next one (jquery.id.twitterfeed-1.0.js) is the Twitter feed plugin for the jQuery.

And the final script file (rotatr.js) is the custom script used for animation, effects and Ajax requests. You can learn more about jQuery methods used here (`fadeOut()`, `fadeIn()`, `fadeTo()`, `animate()`, `jQuery.get()`, `html()`, `delay()`, `hover()` etc.) by visiting this [jQuery Documentation](#) Site.

12. “Send Email” Script & Contact Form

Send Email Script

If the all fields are correct **sendEmail** script will send and Ajax request to the php mailing script located in the **scripts/send_email.php** file. This script will send a message and return mailing status message. Let’s look at this script more closely:

```
1 <?php
2 if (isset($_GET['email'])) $email = $_GET['email'];
3
4 $mail_to = "demo@idangero.us"; //change this email to yours one
5 $subject = "Rotatr Subscription";
6 $message = "
7 New Rotatr visitor want to know when the site will be opened.
8 Visitor's email: $email
9 ";
10 $headers = "From: ".$email."\r\n";
11 $headers .= "Reply-To: ".$email."\r\n";
12 $headers .= "X-Mailer: PHPMailer".".\r\n";
13 $headers .= "Content-Type: text/plain; charset=\\"utf-8\\"";
14 if (mail($mail_to, $subject, $message, $headers)) {
15     ?>
16     <p class="intouch-status">Thanks! We'll keep you informed!</p>
17     <?php
18     }
19     else {
20     ?>
21     <p class="intouch-status">Error Occured. Try again later.</p>
22     <?php
23     }
24     ?>
```

Checking for existence of **\$email** variable

Message will be sent to this e-mail address. So you have to change it to yours

Default headers for the e-mail message.

If the message was successfully sent, the script will return this HTML message.

Otherwise script will return this HTML code with an error message.

You can easily edit this status messages using any HTML formatting.

Ajax Contact Form

HTML code of the contact page is in the **content/contacts.php** file:

```
<div class="left-part" style="float:left;width:340px;margin-right:20px;">
  <h2 class="heading cufoned">Contacts</h2>
  <div class="contact-status"></div>
  <form name="contact" class="contact-form" action="javascript:sendMessage()" method="post">
    <p>You can contact us using the following contact form:</p>
    <p>
      <label> Your Name:<br>
        <input id="contact_name" type="text" class="text" name="name" size="30" />
      </label>
    </p>
    <p>
      <label> Your Email:<br>
        <input id="contact_email" onkeyup="validateEmail('#contact_email')" type="text" class="text" name="email" size="30" />
      </label>
    </p>
    <p>
      <label> Subject:<br>
        <input id="contact_subject" style="color:#777" type="text" class="text" name="subject" size="30" />
      </label>
    </p>
    <p>
      <label> Message:<br>
        <textarea id="contact_message" onkeyup="validateMessage()" name="message" class="text" cols="30" rows="10"></textarea>
      </label>
    </p>
    <p><em>Fields marked with an asterisk(*) are required</em></p>
    <span class="button-l"><span class="button-m">
      <input type="submit" class="button" value="Send Message" />
    </span></span>
  </form>
</div>
<div class="right-part" style="float:left; width:260px;">
  <h2 class="heading cufoned" style="color:#555">How To Find Us</h2>
  <p style="font-weight:bold">Launcher Inc</p>
  <p>114 Second Lane Street, Rostov-na-Donu, 344013, Russian Federation </p>
  <p>Work: +7-863-246-3608<br />
    Fax: +7-863-246-3608<br />
    Email: info@idangero.us</p>
</div>
<div class="clear"></div>
```

If the all fields are correct sendMessage() script will send and Ajax request to the php mailing script located in the **includes/send_message.php** file. This script will send a message and will return mailing status message. Let's look at this script more closely:

If the all fields are correct sendMessage() script will send and Ajax request to the php mailing script located in the **includes/send_message.php** file. This script will send a message and will return mailing status message. Let's look at this script more closely:

```
1 <?php
2 if (isset($_POST['name'])) $name = $_POST['name'];
3 if (isset($_POST['email'])) $email = $_POST['email'];
4 if (isset($_POST['subject'])) $subject = $_POST['subject'];
5 if (isset($_POST['message'])) $message = $_POST['message'];
6 $mail_to = "demo@idangero.us"; // change this email to yours
7 $message = stripslashes($message);
8 $headers = "From: ".$name." <".$email.">\r\n";
9 $headers .= "Reply-To: ".$email."\r\n";

```

Checking for existence of these variables.

Message will be sent to this e-mail address. So you have to change it to yours

Default headers for the e-mail message.

If the message was successfully sent, the script will return this HTML message.

Otherwise script will return this HTML code with an error message.

You can easily edit this status messages using the any HTML formatting.

13. Licensing Terms

Regular License (RL)

RL gives you as a customer non-exclusive & non-transferable right to use the product you've bought, in this case is the **Rotatr** (further "**Item**")

1. We do not limit the number of **Item**'s copies you are going to use. Using one **Item** you can create, for example, even 100 web-sites.
2. You can use the **Item** by itself or it's also possible to apply it in other project you work at.
3. You can use the **Item** for your own purpose as well as for your clients.
4. You can use the **Item** in commercial projects.
5. You can reproduce the **Item**:
 - on a web-site or as a web-site
 - as a part of software you create not for sale
 - as a printed variant
 - in digital(electronic) format (as a presentation or an e-book)
 - in video products
6. All photos used on iDangero.us for demonstration photo gallery functioning are our private property (if only there is nothing said about contrary). It's prohibited to use these photos wherever.
7. You are not allowed to sell, resell, license or give the **Item** free (any way) without our written consent. Please, do not offer to do it to any person.
8. You also do not have the right to use the **Item** in a project for selling (for example, for other templates, scripts, graphics and so on).
9. It's prohibited to rework / redesign / reproduce the **Item** (i.e.to rename it or change graphics & so on) and after this to sell it as your own.
10. In spite of reselling limitation you could claim money for the **Item** from your client.

11.If the **Item** (the whole **Item** or its parts) is created with materials used by GNU General Public License (GPL) (or some other license) it means you should follow all the terms of the license using the **Item**.
