1. About Wio App

Wio App is the premium HTML5 landing page template developed by iDangero.us. It is designed for showcase your iOS app.

2. Wio App Files & Folders Structure

Wio files are located in the **wio-app/** folder from the downloaded archive:

- **css/**: folder with stylesheet .css files
- **less/**: folder with .less files, that can be useful if you want to create your own color themes
- **i/**: here you can find layouts images and icons used in this template.
- **js/**: JavaScript files used in this template
- and the main **index.html** in the root folder

3. Installation

To install Wio App template you just have to copy all files & folders from the **wio-app/** folder to your web-site root folder on the server (It could be a real server or local testing server).

4. HTML Structure

HTML layout located in index.html file. Let's look at some "blocks" more closely:

4.1 CSS Files

There are 4 CSS files used in this template. You can find css attachment in the HEAD section of index.html file. By default they are located in the **css/** folder. You can easily change the path or filename in the href attribute of LINK tag.

normalize.css - makes browsers render all elements more consistently and in line with modern standards. It precisely targets only the styles that need normalizing.

idangerous.swiper.css - contain default styles for screenshots touch slider.

main-[color].css - this file contains all general layouts for the template. It is separated into different sections. If you would like to edit a specific section of the site, simply find the appropriate section in the CSS file, and then scroll down until you find the appropriate style that needs to be edited.

responsive.css - this file contains styles modification for different screen resolutions and devices, for tablets and mobiles.

4.2 Navigation

```
<nav>
  <div class="nav-inner"><a href="#" class="logo scroll-link"></a>
    <ul>
      <li><a href="#download" class="scroll-link">Download</a></li>
      <li><a href="#about" class="scroll-link">About Wio</a></li>
      <li><a href="#features" class="scroll-link">Features</a></li>
      <li><a href="#reviews" class="scroll-link">Press</a></li>
      <li><a href="#contacts" class="scroll-link">Get In Touch</a></li>
    </ul>
  </div>
</nav>
```

As you can see it is pretty simple. Every link connected to appropriate site section by its ID attribute, so if the downloads block has id «downloads» then link should contain #downloads in its href attribute.

Also, add «scroll-link» class for animated scrolling to appropriate block.

4.3 Header parallax background

Header parallax background image located inside of <header> tag:

```
<header>
  <div class="header-bg"></div>
  <div class="header-inner">
    ...
```

Parallax image is set as a background on «header-bg» block. If you need to change it, you may find it in main css file:

```
.header-bg {
```

```

...
background: url(..i/bg.jpg) no-repeat center 0px;
...
}

```

Just change path to new image inside of url(...) statement.

4.4 Video

Video frame located in div with «video-layer» class that inside of <header>:

```

<header>
...
<div class="video-layer">
  <div class="close-video"><a href="#">Close</a></div>
  <div class="video-layer-inner"><iframe src="//www.youtube.com/embed/
IbW0QWw1wkM?html5=1 scrolling="no" frameborder="0" allowfullscreen></iframe></
div>
</div>
</header>

```

You can put here any video service iframe, like Youtube or Vimeo. If you use Youtube video, it is recommended that you enable HTML5 player by adding «?html5=1» to iframe source.

4.5 Screenshots slider

Screenshots slider with mockup iphones located in div with «about» id attribute:

```

<div class="phones">
  <div class="phone phone-left">
    <div class="phone-bg"></div>
    <div class="shadow"></div>
    <div class="swiper-container">
      <div class="swiper-wrapper">
        <!-- First slide is empty -->
        <div class="swiper-slide"></div>
        <div class="swiper-slide"></div>
        <div class="swiper-slide"></div>
        <div class="swiper-slide"></div>
        <div class="swiper-slide"></div>
      </div>
    </div>
  </div>
  <div class="phone phone-right">
    <div class="phone-bg"></div>
    <div class="shadow"></div>
    <div class="swiper-container">
      <div class="swiper-wrapper">
        <div class="swiper-slide"></div>
        <div class="swiper-slide"></div>
        <div class="swiper-slide"></div>
        <div class="swiper-slide"></div>
      </div>
    </div>
  </div>
</div>

```

```
<div class="clearfix"></div>
</div>
```

Each screenshot image in left and right phone should be inside wrapped with «swiper-slide» div:

```
<div class="swiper-slide"></div>
```

Keep first slide in left phone empty to achieve effect that image slides from right phone to left one.

4.6 JavaScripts

Wio template uses 4 JavaScript files

Attachment of JavaScript files can be found in the HEAD section and in the end of index.php file:

```
<script src="js/vendor/modernizr-2.7.1.min.js"></script>
<script src="js/vendor/jquery-1.10.2.min.js"></script>
<script src="js/plugins"></script>
<script src="js/main.js"></script>
```

modernizr-2.7.1.min.js - Modernizr is an open-source JavaScript library that helps you build the next generation of HTML5 and CSS3-powered websites. More information can be found at <http://modernizr.com/>

jquery-1.10.2.min.js - jQuery is a fast and concise JavaScript Library that simplifies HTML document traversing, event handling, animating, and Ajax interactions for rapid web development. More information can be found at <http://jquery.com/>

plugins.js - JavaScript file with a couple of useful JS plugins used in template, such as Swiper (<http://www.idangero.us/sliders/swiper/>) that used for screenshots slider

main.js - is the custom script used for template effects and animation. You can learn more about jQuery methods used here (fadeOut(), fadeIn(), fadeTo(), animate(), jQuery.get(), html(), delay(), hover() etc.) by visiting this [jQuery Documentation](#) Site.

5. Inner Linking

The same as with Navigation, if you want to make link that will scroll site to required section, first of you need to id attribute to this section, like:

```
<div id="my-section">...</div>
```

Then on link, you should add href attribute equal to #[id] and with «scroll-link» class:

```
<a href="#my-section" class="scroll-link">Link to My Section</div>
```

6. Color Themes

Wio comes with 5 color variations. To change color theme all you need is to link main-[color].css file with appropriate color, from left to right: main-blue.css, main-lime.css, main-orange.css, main-purple.css, main-red.css:

7. Less CSS

If you want to make your own color theme, or change site width, or to change fonts, the best option for you is to change them using included .less files in css/less/ folder. All you need to do is to make simple changes in **_config.less** file:

```
//Main theme font
.font() {
    font-family: Helvetica Neue, Helvetica, Arial, sans-serif;
}

//Headings font
.headingFont(){
    font-family: Helvetica Neue, Helvetica, Arial, sans-serif;
    font-weight: 300;
}

//Subheading font
.subHeadingFont() {
    font-family: Helvetica Neue, Helvetica, Arial, sans-serif;
    font-weight: 300;
}

//Blue:
@siteColor: #2189cb;

//Red:
```

```
//@siteColor: #bd1b1b;

//Purple, uncomment to enable:
//@siteColor: #c24da0;

//Lime, uncomment to enable:
//@siteColor: #52c04a;

//Orange, uncomment to enable:
//@siteColor: #f08d00;

//Site width:
@siteWidth: 1200px;

//Logos
@logoUrl: '../i/logo.png';
@logoUrl2x: '../i/logo@2x.png';
@logoWidth: 74px;
@logoHeight: 28px;

@logoBigUrl: '../i/logo-big.png';
@logoBigUrl2x: '../i/logo-big@2x.png';
@logoBigWidth: 262px;
@logoBigHeight: 100px;
```

So if you want to change site maximum width for desktops to 1400px and change theme color to #ff0000 all you need to do is to change these variables:

```
@siteColor: #ff0000;
@siteWidth: 1400px;
```

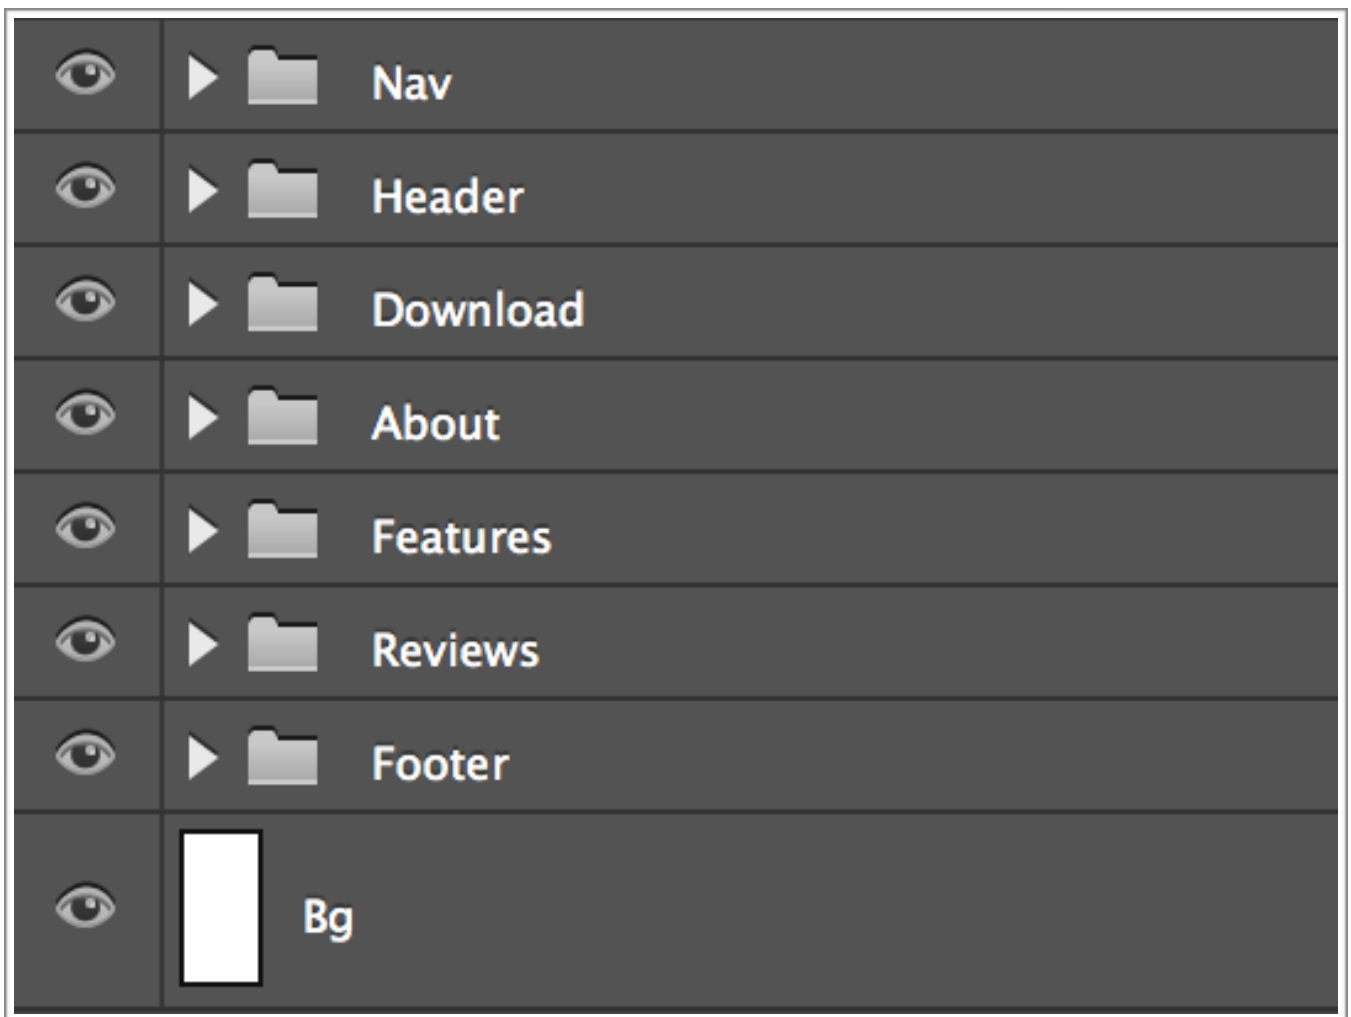

Then you just need to compile main.less and responsive.less files (_config.less is already included there) and replace your main-[color].css and responsive.css files.

To learn more about Less syntax and how to compile it visit its official site <http://lesscss.org/>

8. PSD Files & Structure

There is **one** layered **psd** files comes with the **Wio** template. You can locate it into **psd/** folder form the downloaded archive. Using this file you can easily redesign template and every its element, or to create your own color theme. To edit them file you'll need an Adobe™ Photoshop™ (Recommended is CS6 or higher version)

In this wio-app.psd file you will find separate folders and layers for every element:

All layers in this file are well organized and easy to understand and redesign.

9. Licensing Terms

Regular License (RL)

RL gives you as a customer non-exclusive & non-transferable right to use the product you've bought, in this case is the **Wio App** (further "**Item**")

1. We do not limit the number of **Item**'s copies you are going to use. Using one **Item** you can create, for example, even 100 web-sites.
2. You can use the **Item** by itself or it's also possible to apply it in other project you work at.
3. You can use the **Item** for your own purpose as well as for your clients.
4. You can use the **Item** in commercial projects.
5. You can reproduce the **Item**:

- on a web-site or as a web-site
 - as a part of software you create not for sale
 - as a printed variant
 - in digital(electronic) format (as a presentation or an e-book)
 - in video products
6. All photos used on iDangero.us for demonstration photo gallery functioning are our private property (if only there is nothing said about contrary). It's prohibited to use these photos wherever.
 7. You are not allowed to sell, resell, license or give the **Item** free (any way) without our written consent. Please, do not offer to do it to any person.
 8. You also do not have the right to use the **Item** in a project for selling (for example, for other templates, scripts, graphics and so on).
 9. It's prohibited to rework / redesign / reproduce the **Item** (i.e.to rename it or change graphics & so on) and after this to sell it as your own.
 10. In spite of reselling limitation you could claim money for the **Item** from your client.
 11. If the **Item** (the whole **Item** or its parts) is created with materials used by GNU General Public License (GPL) (or some other license) it means you should follow all the terms of the license using the **Item**.
