1. About “sPhotos”

sPhotos is the Ajax based animated website template. This template is intended for use as a photography portfolio with brief information about the author (photographer or studio).

Template is fully animated without the use of Flash technology. Smooth and good looking animation and Ajax features of this template are realized by using the JavaScript jQuery library.

This template is easy to redesign, it has very simple and clear API.

2. sPhotos Files & Folders Structure

sPhotos files are located in the **sphotos/** folder from the downloaded archive:

content: in this folder there are .php files with content pages.

css: folder with a .css files for different color themes.

images: here you can find layouts images and icons used in this Template and for other color themes.

includes: folder with the content of menu and slider

projects: folder with images for portfolio projects

scripts: JavaScripts and PHP scripts used in this template

And the main **index.html** in the root folder

3. Installation

To install **sPhotos** template you have to copy all files & folders from the **sphotos/** folder to your web-site root folder on the server (It could be a real server or local testing server).

4. HTML Structure

Let's look at the main HTML structure of the sPhotos template. Open index.php file with a text editor (Highly recommended to use Adobe® Dreamweaver® or Notepad ++ editors).

Index.php structure:

```
1 <!DOCTYPE HTML>
2 <html>
3 <head>
4 <meta http-equiv="Content-Type" content="text/html; charset=utf-8">
5 <title>sPhotos</title>
6 <link rel="stylesheet" type="text/css" href="css/sphotos.css" />
7 <script type="text/javascript" src="scripts/jquery-1.6.1.min.js"></script>
8 <script type="text/javascript" src="scripts/cufon-yui.js"></script>
9 <script type="text/javascript" src="scripts/Myriad_Pro_400-Myriad_Pro_600.font.js"></script>
10 <script type="text/javascript" src="scripts/jquery.id.chopslider-1.0.js"></script>
11 <script type="text/javascript" src="scripts/jquery.id.twitterfeed-1.0.js"></script>
12 <script type="text/javascript" src="scripts/sphotos.js"></script>
13 <!--[if lt IE 8]>
14 <link rel="stylesheet" type="text/css" href="css/ie7.css" />
15 <![endif]-->
16 </head>
17 <body>
18 <div id="background">
19 
20 </div>
21 <div id="logo"></div>
22 <div id="menu">
23 <?php include ("includes/menu.php") ?>
24 </div>
25 <div class="tweets">
26 <div class="close-tweets"></div>
27 <p class="tweet-uname"><a href="http://twitter.com/idangerous">@idangerous</a></p>
28 <ul id="tweets">
29
30 </ul>
31 </div>
32 <?php include ("includes/slider.php") ?>
33 <div id="content"></div>
34 <div id="dark-layer"></div>
35 <div id="portfolio"></div>
36 <div id="footer">
37 <div class="copyright">2011 &copy; sPhotos by <a href="http://www.idangero.us">iDangero.us</a>. All
Rights Reserved</div>
```

Site Title

CSS and JavaScript files attachment

CSS style sheet file used for IE7

Section with resizable background image

Site logo

HTML content of the menu will be included from this file

Your twitter username

Twitter feed will be loaded here

HTML content of the slider will be included from this file

"content" div is used to load content pages

"portfolio" div is used to load portfolio or project layouts

Footer

Container with a social links

```
38 <div class="social-links">
39   <a href="#"></a>
40   <a href="#"></a>
41   <a href="#"></a>
42   <a href="#"></a>
43   <a href="#"></a>
44   <a href="#"></a>
45   <a href="#"></a>
46 </div>
47 </div>
48
49 <div id="flickr">
50   <h2 class="fl-title">sPhotos Flickr Gallery
51   <span class="fl-nav">
52     <a class="fl-link" href="#"> My Flickr Account</a>
54     <a class="fl-link closeFlickr" href="#"> Close Gallery</a>
56   </span>
57   </h2>
58   <div class="fl-photos"></div>
59   <div class="fl-pFull"></div>
60   <div class="fl-pTitle"></div>
61   <div class="fl-pDescr"></div>
62 </div>
63 <div class="loader-content"></div>
64 <div class="ajax-loader"></div>
65 <div id="popup">
66   <div class="close-popup"></div>
67   <div class="popup-content">
68     <div class="p-image"></div>
69     <div class="p-title"></div>
70   </div>
71 </div>
72 <div class="ajax-loader-2"></div>
</body>
</html>
```

Container for the Flickr gallery

Flickr gallery title

Link to your Flickr account

Small flickr thumbs will be loaded into the "fl-photos" div. Full preview image will be loaded in to the "fl-pFull" div, title and description of photo will be loaded into the "fl-pTitle" and "fl-pDescr" divs

"loader-content" is the small rotated animated box on the dark-layer which will appear when you'll try to load page with a content layout

Popup container is used to load popup images

Menu

Menu HTML content is located in **the includes/menu.php** file:

Div with a "menu-link" class contains parent menu links

"link-bg" div contains faded background image for menu link

Use unsorted lists for the submenus like in this example

Put every submenu into list element with tag.

```
1 <div class="menu-link">
2   <div class="link-bg"></div>
3   <a href="#" class="toHome">Home</a> </div>
4 <div class="menu-link">
5   <div class="link-bg"></div>
6   <a href="#">Portfolio</a>
7   <ul class="submenu">
8     <li><span class="link-bg"></span><a href="#portfolio/portfolio-3" class="loadFolio">Portfolio 3 Col
9 </a></li>
10    <li><span class="link-bg"></span><a href="#portfolio/portfolio-2" class="loadFolio">Portfolio 2 Col
11 </a></li>
12    <li><span class="link-bg"></span><a href="#portfolio/portfolio-1" class="loadFolio">Portfolio Full
13 Width</a></li>
14    <li><span class="link-bg"></span><a href="#portfolio/portfolio-mixed" class="loadFolio">Portfolio
15 Mixed</a></li>
16    <li><span class="link-bg"></span><a href="#project/demo-project" class="loadProject">Project Page</a
17 </li>
18 </ul>
19 </div>
20 <div class="menu-link">
21   <div class="link-bg"></div>
22   <a href="#flickr-gallery" class="loadFlickr">Flickr Gallery</a> </div>
23 <div class="menu-link">
24   <div class="link-bg"></div>
25   <a href="#">Features</a>
26   <ul class="submenu">
27     <li><span class="link-bg"></span><a href="#content/features" class="loadContent">sPhotos Features</a
28 </li>
29     <li><span class="link-bg"></span><a href="#content/blog" class="loadContent">Blog Page</a></li>
30     <li><span class="link-bg"></span><a href="#content/post" class="loadContent">Post Page</a></li>
31     <li><span class="link-bg"></span><a href="#content/grid" class="loadContent">Layout Grid</a></li>
32 </ul>
33 </div>
34 <div class="menu-link">
35   <div class="link-bg"></div>
36   <a href="#content/about" class="loadContent">About</a> </div>
37 <div class="menu-link">
38   <div class="link-bg"></div>
39   <a href="#content/contacts" class="loadContent">Contacts</a> </div>
40 <div class="menu-link openTwitter"></div>
```

Slider

Slider content is located in the includes/slider.php file. Let's look at this HTML more closely:

These two divs are used for slider back shadows

Slider's next and previous buttons

Container with a slide descriptions.

Slider's images. Every slider image must be inside of "slide" div. "activeSlide" class must be added for the first slide

HTML content of every slide's description must be inside of simple div element

Descriptions will be loaded here

This container is used for slides animation

```
1 <div class="slider">
2   <div class="s-shadow-t"></div>
3   <div class="s-shadow-b"></div>
4   <a id="slide-next" href="#"></a> <a id="slide-prev" href="#"></a>
5   <div id="slider">
6     <div class="slide activeSlide">  </div>
8     <div class="slide">  </div>
9     <div class="slide">  </div>
10    <div class="slide">  </div>
11  </div>
12  <div class="slide-descriptions">
13    <div>
14      <h3 class="slide-title">sPhotos Home Page</h3>
15      <p><strong>sPhotos</strong> is the Ajax based animated website template. This template is intended
16      for use as a photography portfolio with brief information about the author (photographer or studio).
17      <strong>sPhotos</strong> comes with the big awesome animated <a href="http://www.idangero.us/cs" target=
18      "_blank">Chop Slider</a> on a home page. You can put any html content inside of this description block.
19      Read more about sPhotos <a href="#content/features" class="loadContent">features</a>.</p>
20    </div>
21    <div>
22      <div class="slide-col" style="width:270px">
23        <h3 class="slide-title">Flickr Integration</h3>
24        <p><strong>sPhotos</strong> has awesome animated full-width <a href="#flickr-gallery" class=
25        "loadFlickr">Flickr gallery</a>, which will load 100 recent photos from your Flickr account.</p>
26      </div>
27      <div class="slide-col" style="width:270px">
28        <h3 class="slide-title">Portfolio Layouts</h3>
29        <p>sPhotos comes with ready to use animated portfolio page. Check them out: <a href=
30        "#portfolio/portfolio-3" class="blink loadFolio">Portfolio 3 Col</a>, <a href="#portfolio/portfolio-2"
31        class="blink loadFolio">Portfolio 2 Col</a>, <a href="#portfolio/portfolio-1" class="blink loadFolio">
32        Portfolio 1 Col</a>, <a href="#portfolio/portfolio-mixed" class="blink loadFolio">Portfolio Mixed</a>.</
33        p>
34      </div>
35      <div class="slide-col" style="width:270px">
36        <h3 class="slide-title">Portfolio Project Page</h3>
37        <p>Look at the example of the portfolio <a href="#project/demo-project" class="loadProject">
38        project page</a>.</p>
39      </div>
40    </div>
41    <div><h3 class="slide-title">Just a Photo</h3></div>
42    <div><h3 class="slide-title">Another Photo</h3></div>
43  </div>
44  <div class="slide-descr"></div>
45 </div>
46 <div id="slide-loader">
47   <div class="dummy-blocks">
48     <div class="dummy-first"></div>
49     <div class="dummy-last"></div>
50   </div>
51 </div>
```

5. sPhotos Configuration

sPhotos configuration is located in the main script file in the scripts/sphotos.js file. Let's open this file with a text editor:

```
sP = {
  replaceFonts : ".cufoned,.menu-link
a,.loader-content,.slide-title,h2.heading,h3.blog-title,h3.inner-heading,.p-title,.folio-title,.pr-headi
ng,h2.image-title,.full-size,.fit-screen,.fl-title,.fl-pTitle,.fl-link,.tweet-uname",
  shareTwitter : true,
  twitterUsername: "idangerous",
  shareFaceBook : true,
  faceBookLikeURL : "http://www.idangero.us",
  flickrAPIKey: "30a37e5dd95ab44d8e38443027a7c4e7",
  flickrUserID: "64011873@N04",
  sliderParams : {
    loader : "#slide-loader",
    slide : ".slide",
    nextTrigger : "a#slide-next",
    prevTrigger : "a#slide-prev",
    type: "multi",
    disableCSS3 : true,
    xOffset: 20,
    yOffset: 20,
    hPieces : 10,
    vPieces: 10,
    rotate : 0 ,
    rotateSymmetric: false,
    scaleX:1,
    scaleY:1,
    dur1: 600,
    dur2 :600,
    dur3: 600,
    pieceDelay : 50,
    xFadeDelay :0,
    hideControls:true,
    onStart: function(){hideDescr()},
    onEnd: function(){showDescr()}
  },
  twitterFeed : {
    container : "#tweets",
    username : "idangerous",
    numberOfTweets : 3,
    tweetFormat : '<li class="single-tweet">'
      + '<p class="tweet-text">'
      + '%tweetText'
      + '</p>'
      + '<p class="tweet-date">on %tweetDate</p>'
      + '</li>'
  }
}
```

Project Page Settings

shareTwitter

Boolean value. Should the tweet button be on the project photo preview page

twitterUsername

String value. Your twitter username. Will be used in the TWEET button code

shareFacebook

Boolean value. Should the LIKE button be on the project photo preview page

faceBookLikeURL

String value. URL to like which will be used in the LIKE button code

Flickr Gallery Settings

flickrAPIKey

String value. Your Flickr API key

flickrUserID

String value. Your Flickr username

Cufon replacement

replaceFonts

String value. List of CSS selectors of the elements for which will be executed font replacement.

Slider Settings

loader

String value. CSS selector of the slide-loader container.

slide

String value. CSS selector of the single slide container.

nextTrigger

String value. CSS selector of the “slide-next” element.

prevTrigger

String value. CSS selector of the “slide-prev” element.

type

String value. Can be “vertical”, “horizontal” or “multi”

disableCSS3

Boolean value. “true” or “false”

xOffset

Numeric value. Horizontal offset of slide pieces in px

yOffset

Numeric value. Vertical offset of slide pieces in px

hPieces

Numeric value. Number of horizontal pieces. Used in “horizontal” and “multi” sliders type.

vPieces

Numeric value. Number of vertical pieces. Used in “vertical” and “multi” sliders type.

rotate

Numeric value. Rotate angle in degrees for each slide piece

rotateSymmetric

Boolean value. “true” or “false”

scaleX

Numeric value. Horizontal scale multiplier for each slide piece

scaleY

Numeric value. Vertical scale multiplier for each slide piece

dur1

Numeric value. Duration in ms for the first transition part

dur2

Numeric value. Duration in ms for the second transition part – cross fade time for each slide peace to the new image

dur3

Numeric value. Duration in ms for the last (final) transition part

pieceDelay

Numeric value. Delay in ms for the each slide piece

xFadeDelay

Numeric value. Delay in ms between first transition part and start of cross fade (second transition part)

hideControls

Boolean value. “true” or “false”. Should the slider triggers be hidden during the animation

onStart

Function. Which function will be executed in the beginning of the slider animation

onEnd

Function. Which function will be executed after the slider animation is completed

Twitter Feed

container

Container for the Twitter feed. In this case this is the element with a "tweets" id attribute. By the default it is located in the right bottom module - `<ul id="tweets">`

username

Your Twitter Username here.

numberOfTweets

Number of your recent tweets (including re-tweets) to display

teetFormat

HTML format to display every tweet. If you want to use your own tweet formatting feel free to edit default format.

6. Typography & Layout Grid

Additional Myriad Pro font usage

sPhotos is powered with an awesome additional Myriad Pro font. Its usage is available due to the Cufon JavaScript library.

To use Myriad Pro font for template elements all you need is to add "cufoned" class to them.

Headings

There are two headings used in this template.

sPhotos Features

You need the following formatting for such headings:

```
<h2 class="heading">Some Heading</h2>
```

Imageless Design

You need the following formatting for such headings:

```
<h3 class="inner-heading">Imageless Design</h3>
```

Buttons

Send Message

Send Message

To create button you have to create “link” or “button” element with a “button” (or “button-s” class for small buttons) class

You should use the following formatting for buttons:

```
<a href="#" class="button">Big Button</a>
or
<input type="submit" class="button-s" value="Small Button" />
```

Layout Grid

sPhotos comes with a ready to use layout grid which gives you full control over your content pages.

The image displays a grid layout with various column widths and their corresponding HTML code snippets. The grid is organized into rows and columns, with each cell showing a title, a placeholder text, and a code snippet for a `div` element with a specific class.

One Half

Placeholder text: Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nunc...

Code snippet: `<div class="one-half">...</div>`

One Half

Placeholder text: Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nunc...

Code snippet: `<div class="one-half last">...</div>`

One Third

Placeholder text: Lorem ipsum dolor sit amet, consectetur...

Code snippet: `<div class="one-third">...</div>`

One Third

Placeholder text: Lorem ipsum dolor sit amet, consectetur...

Code snippet: `<div class="one-third">...</div>`

One Third

Placeholder text: Lorem ipsum dolor sit amet, consectetur...

Code snippet: `<div class="one-third last">...</div>`

One Third

Placeholder text: Lorem ipsum dolor sit amet, consectetur...

Code snippet: `<div class="one-third">...</div>`

Two Third

Placeholder text: Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nunc semper nibh congue ligula...

Code snippet: `<div class="two-third last">...</div>`

One Fourth

Placeholder text: Lorem ipsum dolor sit amet,...

Code snippet: `<div class="one-fourth">...</div>`

One Fourth

Placeholder text: Lorem ipsum dolor sit amet,...

Code snippet: `<div class="one-fourth">...</div>`

Two Fourth

Placeholder text: Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nunc...

Code snippet: `<div class="two-fourth last">...</div>`

One Fourth

Placeholder text: Lorem ipsum dolor sit amet,...

Code snippet: `<div class="one-fourth">...</div>`

Three Fourth

Placeholder text: Lorem ipsum dolor sit amet,...

Code snippet: `<div class="three-fourth last">...</div>`

7. Inner Linking & Popup Window

As the sPhotos is the “one-page” Ajax template, all additional content should be loaded with Ajax using the special classes for the links. So let's see how the Inner Linking works. This you should know first:

*All files with HTML content you want to load with Ajax request must be located in the **content/** folder.*

*All files must have a **.php** extension.*

Loading Content into Content Section

This type of request we use when we need to load page with HTML content like blog, post, contacts, features etc..

Example. We want to load HTML content from the **content/about.php** file into the content section. We should use the following formatting:

```
<a href="#content/about" class="loadContent">About</a>
```

When we'll specify a “loadContent” class, the script will load file content with Ajax into Content Section

Before file name we have to specify type of loaded content right after the hash character. “content” means that we will load the file into the content section

Filename of the **php** file from the **content/** folder specified in the href attribute **after the hash character**.

Loading Portfolio Page

This type of request we use when we need to load page with portfolio HTML content like blog, post, contacts, features etc. in the special Portfolio section.

Example. We want to load HTML content from the **content/portfolio.php** file into the Portfolio section. We should use the following formatting:

```
<a href="#portfolio/portfolio" class="loadFolio">Portfolio</a>
```

When we'll specify a “loadFolio” class, the script will load file content with Ajax into Portfolio Section with a special animation

Before file name we have to specify type of loaded content right after the hash character. “portfolio” means that we will load the file into the portfolio section

Filename of the **php** file from the **content/** folder specified in the href attribute **after the hash character**.

Loading Portfolio Project

This type of request we use when we need to load page with portfolio project.

Example. We want to load HTML content from the **content/demo-project.php** file into the portfolio section. We should use the following formatting:

```
<a href="#project/demo-project" class="loadProject">Demo project</a>
```

When we'll specify a "loadProject" class, the script will load file content with Ajax into Portfolio Section

Before file name we have to specify type of loaded content right after the hash character. "project" means that we will load the file into the portfolio section with the special animation

Filename of the **php** file from the **content/** folder specified in the **href** attribute **after the hash character**.

Returning to the home page

It is very easy to return to home page. All you need is to use the following formatting for the links:

```
<a href="#" class="toHome">Home Page</a>
```

As you can see it is very easy to use Inner Linking. All you need is to specify filename in the HREF attribute after the hash character and to specify the appropriate class to load content.

Using Popup Window

sPhotos comes with easy to use popup window to show your images in full size. All you need is to use the following formatting:

```
<a href="images/demo/car.jpg" data-title="Demo Title" class="pop-image">Popup Image</a>
```

Link to full size image

Title of image

You need to specify "pop-image" class for the link to make popup works

8. Portfolio Page Structure

Let's look at the portfolio page HTML structure on the simplified code of the mixed portfolio page:

```
<h2 class="pr-heading">sPhotos Portfolio</h2>
```

sPhotos Portfolio

```
<h3 class="folio-title">Graphics</h3>
```

Don River

Graphics

People

```
<div class="folio-item f-third">
...
</div>
```

```
<div class="folio-item f-third">
...
</div>
```

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Suspendisse non quam ut sapien convallis sagittis non id orci.

```
<div class="folio-item f-third last">
...
</div>
```

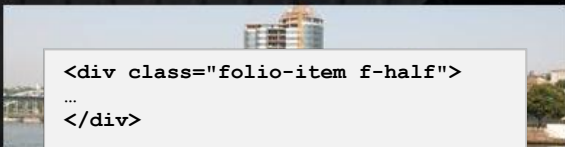

Project Photos

Project Photos

```
<div class="clear"></div>
```

```
<a class="button-s loadProject" href="#project/demo-project">Project Photos</a>
```

Don River

```
<div class="folio-item f-half">
...
</div>
```

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Suspendisse non quam ut sapien convallis sagittis non id orci.

Project Photos

```
<div class="folio-item f-half last">
...
</div>
```

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Suspendisse non quam ut sapien convallis sagittis non id orci.

Project Photos

```
<div class="clear"></div>
```

Don River

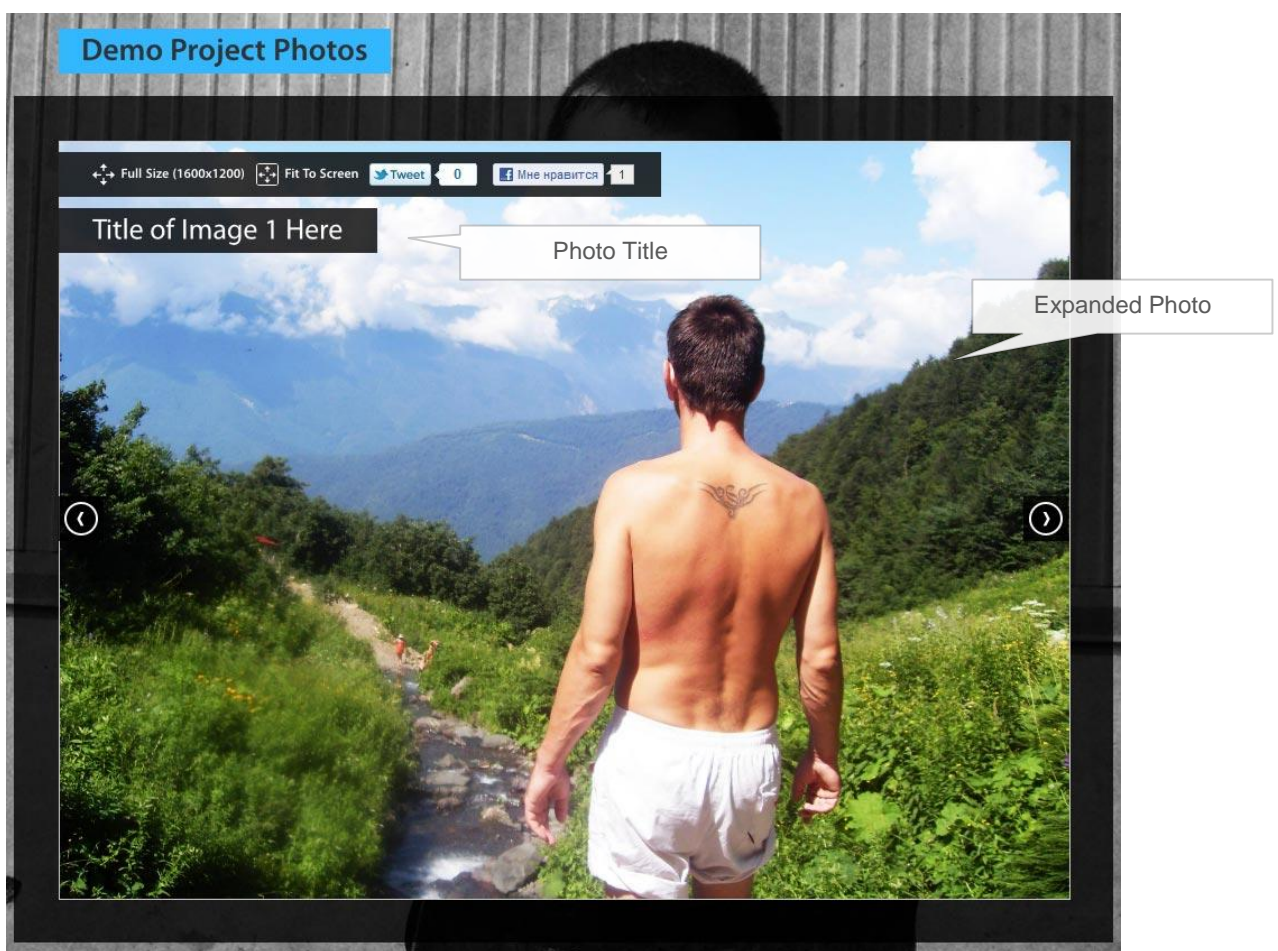

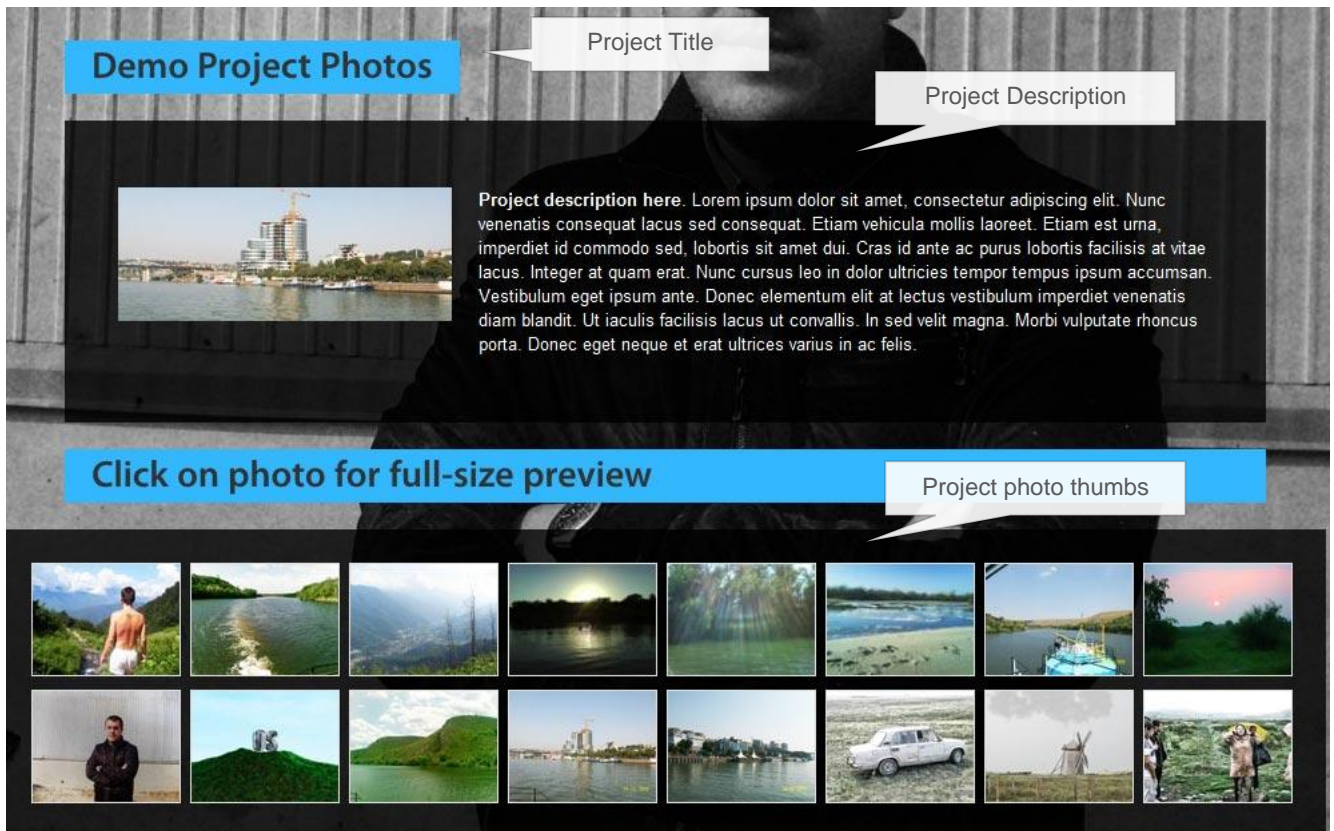

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Suspendisse non quam ut sapien convallis sagittis non id orci. Suspendisse non quam ut sapien convallis sagittis non id orci. Lorem ipsum dolor sit amet, consectetur adipiscing elit.

Project Photos

```
<div class="folio-item f-full">
  <h3 class="folio-title">Don River</h3>
  <a style="float:left; margin:0 20px 20px 0" href="#project/demo-project" class="blink loadProject"></a>
  <p>Lorem ipsum dolor sit amet, consectetur adipiscing elit. Suspendisse non quam ut sapien convallis sagittis non id orci. Suspendisse non quam ut sapien convallis sagittis non id orci. Lorem ipsum dolor sit amet, consectetur adipiscing elit.</p>
  <p><a class="button-s loadProject" href="#project/demo-project">Project Photos</a></p>
</div>
```

9. Portfolio Project Page Structure

Let's look at the portfolio project page HTML structure on the simplified code of the demo project (content/demo-project.php) page:

Project Title

Project Description

Image loader contains images which will be show while full size photo loading

Full image will be loaded here

Image title will be placed here

Prev and Next buttons

Full Photo size will be placed here

Full size photo source

Container with a links-thumbs

Thumb source

```
1 <h2 class="pr-heading">Demo Project Photos</h2>
2 <div class="pr-description">
3   <div class="pr-descr">
4     <p><strong>Project
description here</strong>. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nunc venenatis
consequat lacus sed consequat. Etiam vehicula mollis laoreet. Etiam est urna, imperdiet id commodo sed,
lobortis sit amet dui. Cras id ante ac purus lobortis facilisis at vitae lacus. Integer at quam erat.
Nunc cursus leo in dolor ultricies tempor tempus ipsum accumsan. Vestibulum eget ipsum ante. Donec
elementum elit at lectus vestibulum imperdiet venenatis diam blandit. Ut iaculis facilisis lacus ut
convallis. In sed velit magna. Morbi vulputate rhoncus porta. Donec eget neque et erat ultrices varius
in ac felis. </p>
5   </div>
6   <div class="image-loader"></div>
7   <div class="full-image"></div>
8   <h2 class="image-title"></h2>
9   <div class="next-image"></div>
10  <div class="prev-image"></div>
11  <div class="image-controls">
12    <div class="full-size">Full Size <span class="im-size"></span></div>
13    <div class="fit-screen">Fit To Screen</div>
14  </div>
15 </div>
16 <h2 class="pr-heading click-photo">Click on photo for full-size preview</h2>
17 <div class="pr-images">

11. CSS Files

There are two CSS files used in this Template You can find css attachment in the HEAD section of index.html file.

```
<head>
-----
<link rel="stylesheet" type="text/css" href="css/sphotos.css" />
-----
<link rel="stylesheet" type="text/css" href="css/ie7.css" />
-----
</head>
```

By default they are located in the **css/** folder. You can easily change the path or filename in the *href* attribute of *link* tag.

sphotos.css file contains all general layouts for the template. It is separated into sections:

```
/* --- Common Rules --- */
```

There are common rules in this section, such as font size, fonts, link colors, layout images etc.

```
/* --- Headings--- */
```

Some rules for headings

```
/* --- Logo--- */
```

Some rules for Logo

```
/* --- Menu--- */
```

Rules menu items and submenus

```
/* --- Footer--- */
```

Rules for the footer and social links

```
/* --- Content Loader--- */
```

Style rules for the content loader

```
/* --- Content--- */
```

Few rules for home content section

```
/* --- Layout Grid--- */
```

Rules for the content Layout Grid

```
/* --- Blog--- */
```

This section contains style rules for blog and its elements

```
/*----- Portfolio-----*/
```

Styling rules for the portfolio page

```
/* --- Portfolio Project--- */
```

Rules for the portfolio project page

```
/* --- Flickr Gallery--- */
```

This section contains style rules for the Flickr Gallery

```
/*----- Forms-----*/
```

Styling rules for the forms and its elements

```
/* --- Popup Window--- */
```

Some rules for popup window

```
/* --- Ajax-Loader--- */
```

Rule for the Ajax Loader

```
/* --- Slider--- */
```

Rules for the home page slider

```
/* --- Twitter Feed--- */
```

Rules for the twitter feed

```
/*-----End of CSS File-----*/
```

If you would like to edit a specific section of the site, simply find the appropriate section in the CSS file, and then scroll down until you find the appropriate style that needs to be edited.

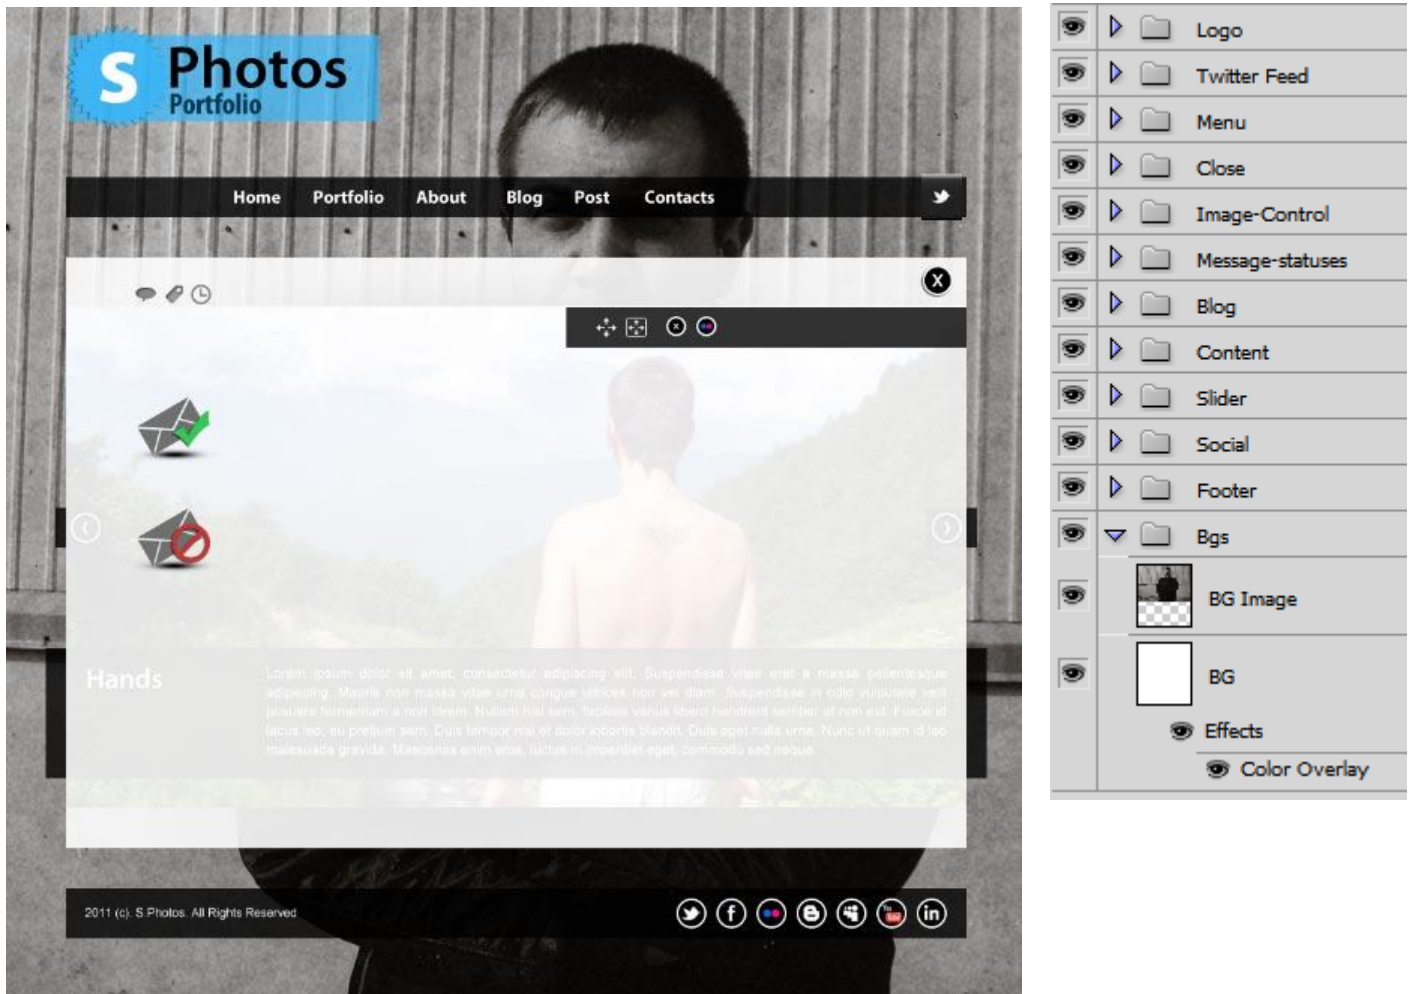

And the last CSS file **ie7.css** contains few rules for Internet Explorer 7 browser.

12. PSD Files & Structure

There are **two** layered **.psd** files comes with the **sPhotos** template. You can locate them into **psd/** folder form the downloaded archive. Using these files you can easily redesign template.

To edit these files you'll need an Adobe™ Photoshop™ (Recommended is CS4 or higher version)

First .psd file is **sphotos.psd**. It contains all general layouts for template styling:

Last psd file is the **social-links.psd**, it contains social icons styling:

All layers in these file are well organized and easy to understand and redesign.

13. Customization

To customize sPhotos template you need to use included psd files and probably to make some changes in template CSS files. Because the sPhotos is imageless template all you really have to do before start is to just change background image of template and logo.

Background Image

It is located in the index.php file:

```
<div id="background">
  
</div>
```

Just change this SRC attribute to your new image and that is done. Try to use as large image as possible. Recommended to use it about 2000px in width.

Logo

To change logo image, you need to replace default logo image in images/layouts/logo.png with yours one. Just try to make your new logo image not larger than **900x110px**

14. JavaScripts

sPhotos template uses six JavaScript files

Attachment of JavaScript files can be found in the HEAD section of index.php file:

```
<head>
-----
<script type="text/javascript" src="scripts/jquery-1.6.1.min.js"></script>
<script type="text/javascript" src="scripts/cufon-yui.js"></script>
<script type="text/javascript" src="scripts/Myriad_Pro_400-Myriad_Pro_600.font.js"></script>
<script type="text/javascript" src="scripts/jquery.id.chopslider-1.0.js"></script>
<script type="text/javascript" src="scripts/jquery.id.twitterfeed-1.0.js"></script>
<script type="text/javascript" src="scripts/sphotos.js"></script>
-----
</head>
```

You can easily change the path or filename in the **src** attribute of **script** tag.

The first script file is the jQuery (JavaScript library that greatly reduces the amount of code that you must write).

Second script file (cufon-yui.js) is the Cufon library. Used here for text replacement with a Myriad Pro font. [Visit official website](#).

Third script file (Myriad_Pro_400-Myriad_Pro_600.font.js) is the encoded Myriad Pro font.

Next file (jquery.id.chopslider-1.0.js) is the exclusive Chop Slider for the jQuery.

Next one (jquery.id.twitterfeed-1.0.js) is the Twitter feed plugin for the jQuery.

And the final script file (sphotos.js) is the custom script used for animation, effects and Ajax requests. You can learn more about jQuery methods used here (`fadeOut()`, `fadeIn()`, `fadeTo()`, `animate()`, `jQuery.get()`, `html()`, `delay()`, `hover()` etc.) by visiting this [jQuery Documentation](#) Site.

15. Ajax Contact Form

HTML code of the contact page is in the **content/contacts.php** file:

```
<div class="content-bg">
  <div class="one-half">
    <h2 class="heading">Contacts</h2>
    <div class="contact-status"></div>
    <form name="contact" class="contact-form" action="javascript:sendMessage()" method="post">
      <p>You can contact us using the following contact form:</p>
      <p>
        <label> Your Name:<br>
          <input id="contact_name" type="text" class="text" name="name" size="30" />
        </label>
      </p>
      <p>
        <label> Your Email:<br>
          <input id="contact_email" onKeyUp="validateEmail('#contact_email')" type="text" class="text"
name="email" size="30" />
        </label>
      </p>
      <p>
        <label> Subject:<br>
          <input id="contact_subject" style="color:#777" type="text" class="text" name="subject" size=
"30" />
        </label>
      </p>
      <p>
        <label> Message:<br>
          <textarea id="contact_message" onKeyUp="validateMessage()" name="message" class="textarea"
cols="30" rows="5"></textarea>
        </label>
      </p>
      <p><em>Fields marked with an asterisk(*) are required</em></p>
      <input type="submit" class="button" value="Send Message" />
    </form>
  </div>
  <div class="one-half last">
    <h2 class="heading" style="color:#555">How To Find Us</h2>
    <p style="font-weight:bold">sPhotos Inc</p>
    <p>114 Second Lane Street, Rostov-na-Donu, 344013, Russian Federation </p>
    <p>Work: +7-863-246-3608<br />
      Fax: +7-863-246-3608<br />
      Email: demo@idangero.us</p>
  </div>
  <div class="clear"></div>
</div>
```

Status message will be inserted here

If the all fields are correct `sendMessage()` script will send and Ajax request to the php mailing script located in the **scripts/send_message.php** file. This script will send a message and will return mailing status message. Let's look at this script more closely:

```

1  <?php
2  if (isset($_POST['name'])) $name = $_POST['name'];
3  if (isset($_POST['email'])) $email = $_POST['email'];
4  if (isset($_POST['subject'])) $subject = $_POST['subject'];
5  if (isset($_POST['message'])) $message = $_POST['message'];
6  $mail_to = "demo@idangero.us"; // change this email to yours
7  $message = stripslashes($message);
8  $headers = "From: ".$name." <".$email.">\r\n";
9  $headers .= "Reply-To: ".$email."\r\n";
10 $headers .= "X-Mailer: PHPMailer".".\r\n";
11 $headers .= "Content-Type: text/plain; charset=\\"utf-8\\"";
12 if (mail($mail_to, $subject, $message, $headers)) {
13     ?>
14
15     <div class="mail-sent">
16         <p></p>
17         <p>Thanks! Your message has been successfully sent!</p>
18     </div>
19     <?php
20     }
21     else {
22     ?>
23     <div class="mail-error">
24         <p>
25         <p>Error Occured. Try again later.</p>
26     </div>
27     <?php
28     }
29     ?>

```

Checking for existence of these variables.

Message will be sent to this e-mail address. So you have to change it to yours

Default headers for the e-mail message.

If the message was successfully sent, the script will return this HTML message.

Otherwise script will return this HTML code with an error message.

You can easily edit this status messages using the any HTML formatting.

16. Licensing Terms

Regular License (RL)

RL gives you as a customer non-exclusive & non-transferable right to use the product you've bought, in this case is the **sPhotos** (further "**Item**")

1. We do not limit the number of **Item**'s copies you are going to use. Using one **Item** you can create, for example, even 100 web-sites.

2. You can use the **Item** by itself or it's also possible to apply it in other project you work at.
3. You can use the **Item** for your own purpose as well as for your clients.
4. You can use the **Item** in commercial projects.
5. You can reproduce the **Item**:
 - on a web-site or as a web-site
 - as a part of software you create not for sale
 - as a printed variant
 - in digital(electronic) format (as a presentation or an e-book)
 - in video products
6. All photos used on iDangero.us for demonstration photo gallery functioning are our private property (if only there is nothing said about contrary). It's prohibited to use these photos wherever.
7. You are not allowed to sell, resell, license or give the **Item** free (any way) without our written consent. Please, do not offer to do it to any person.
8. You also do not have the right to use the **Item** in a project for selling (for example, for other templates, scripts, graphics and so on).
9. It's prohibited to rework / redesign / reproduce the **Item** (i.e.to rename it or change graphics & so on) and after this to sell it as your own.
10. In spite of reselling limitation you could claim money for the **Item** from your client.
11. If the **Item** (the whole **Item** or its parts) is created with materials used by GNU General Public License (GPL) (or some other license) it means you should follow all the terms of the license using the **Item**.
